

De-Stressing the PIP

Facilitated by Qualis Health

Deron Ferguson, Ricci Rimpau,
Lisa Warren, and Crystal Didier

July 29, 2015

Advancing Healthcare
Improving Health

Objectives Today

- Quick Review of Standards
- Past Performance
- Reducing the Stress
 - Barriers
 - Uncertainties
- Synthesis

PIP Validation Standards

1. Study Topic
2. Study Question
3. Study Population
4. Study Indicator
5. Data Collection and Analysis Plan
6. Study Results
7. Interpretation of Results
8. Improvement Strategies
9. Repeated Measurement of the Study Indicator
10. Sustained Improvement

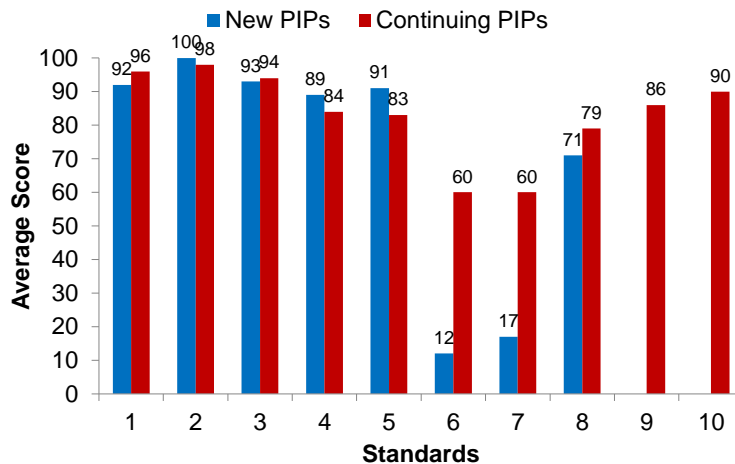

2014 PIP Summary

Clinical and Nonclinical PIP Topics		Children's PIP Topics	
Care Coordination	4	Impact of WISe (Wraparound)	3
Weight reduction/monitoring	2	Care coordination	2
Access to OP services	2	Identifying high risk/need	2
Reducing readmissions	1	Access to OP services	2
Depression	1	Reducing readmissions	1
Community resources	1	Child and Family teams	1

2014 PIP Validation Results

5

2014 PIP Recommendations

- Analyze local Medicaid data to justify selection of study topics (Std. 1)
- Provide evidence validating study indicator (Std. 4)
- Demonstrate that intervention addresses barriers identified through root cause analysis or other QI process (Std. 8)

6

2014 PIP Recommendations

- Plan and report tracking measures on degree of implementation (Std. 8)
- Design PIPS so that second measurement will happen within 3-4 years (Std. 10)
- Timely selection of a new PIP – at second measurement or if study is found to be flawed and no longer feasible (Std. 10)

7

Significance of Results

- Reminder: there are two types of significance:
 - **Statistical:** formal test of whether observed difference is likely greater what could be attributed to random variation
 - **Practical:** the observed difference in terms of effect size – how many patients improved, how many fewer events, etc.

8

Discussion of Barriers

In groups, let's consider the following:

- What are the challenges or barriers to carrying out your PIP activities?
 1. Study selection (topic and question)
 2. Measurement
 3. Data collection and reporting
 4. Results and interpretation
 5. Implementing improvement
